

Contec GmbH, German solution provider of innovative filtration and separation systems signed distribution agreement in the US.

Bad Honnef/Germany, 01 October 2013 - Contec® GmbH, one of Germany's leading solution provider of **innovative filtration and separation systems** today announced that they have signed a representation and **distribution agreement with Marty Hendrickx** of Component Specialists in Roscoe, Illinois to better meet the increasing demand for the Contec® Oil Mist Separators (COMS) in the US.

Contec® plans to develop operations and projects in the US were initiated by visits to various trade shows as well as increasing requests for Contec® Oil Mist Separators (COMS) directly from the US. The new distribution cooperation which includes after-sales services and direct delivery of spare and wearing parts within the US will be the company's second representation outside Germany. With Marty Hendrickx Contec® GmbH continues strengthening its sales on the US market. Marty has been very successful in sales for years and has over 25 years of experience in sales, marketing and engineering of components for the commercial vehicle and Power Generation industry. This new cooperation and representation will allow Contec® to better serve, market and commercialize its products on the US market. The company has recently set up a new distributor in Hyderabad, India, as well.

"The new distribution agreement and representation in Roscoe, Illinois is an important step towards realizing our sales targets outside Germany" said Jochen Lehmkuhl, managing director of Contec®. "This new representation is the first of many important changes for the company in 2013. It will help us to provide a **better and quicker service** and thereby further grow the business that we currently enjoy in the US." The new direct contact in the US will primarily handle Contec®'s flagship product - **Contec® Oil Mist Separators (COMS)**.

The Power Generation as well as Oil & Gas industry has undergone significant changes after Fukushima towards a mix of conventional but more efficient power technology and the renewable energy. Beginning in 1987 a filtration system for the **extraction and filtration of oil mist** was developed by Contec® in close cooperation with one of the customers. This was the starting point of the Contec® Oil Mist Separators (COMS) which was **awarded the Environmental Technology Award** in 1990. The filter system has recently been adapted for the extraction and filtration of oil mist on the Celebrity Silhouette which is the fourth of five ships for the shipping company Celebrity Cruises.

About

Founded in 1972 Contec® has been working on filtration technology for industrial applications since 1974. Its Oil Mist Separators (COMS) is known for its compact design and customized configuration variants.
